

Golden State Water Highlights More Than \$110 Million Planned for Water Infrastructure Projects in 2017

In recognition of “Infrastructure Week” from May 15-19, 2017, Golden State Water Company (Golden State Water) highlighted plans to invest more than \$110 million for water infrastructure projects in 2017. These investments are planned throughout Golden State Water’s 21 service areas, which span across 76 communities in Southern, Coastal and Northern California.

Golden State Water continually invests to maintain and improve the local water system to ensure delivery of reliable, quality water is not compromised. Customers interested in learning more about the infrastructure investments planned for their area are encouraged to [click here](#) (select community on map).

“Golden State Water has invested approximately \$700 million companywide for infrastructure improvements over the last decade, because proactive system maintenance is critical to protecting water service now and for future generations,” said Denise Kruger, Senior Vice President of Regulated Utilities for Golden State Water. “We continually invest to improve our water systems here locally and across all of our service territories.”

The American Society of Civil Engineers recently released its 2017 Report Card for America’s Infrastructure, which assigned a “D” grade to the nation’s drinking water infrastructure. The report noted that upgrading existing water systems to meet drinking water infrastructure needs of a growing population may require at least \$1 trillion over the next 25 years.

“As the nation’s aging water infrastructure continues to draw much attention, proactive system investments to protect water systems and avoid the costly and sometimes dangerous effects of deferring maintenance is now more important than ever,” said Kruger. “We appreciate the community’s patience as we work to complete these important projects.”
