

Golden State Water Company Celebrates National Water Quality Month

In observance of Water Quality Month in August, Golden State Water Company (Golden State Water) is highlighting the measures we take to deliver reliable, high-quality drinking water to customers throughout the State of California.

Delivering drinking water is serious business, and our team of scientists, engineers and water experts share the focus of protecting our water systems and delivering reliable, quality water to customers whenever they need it. Our team of water quality professionals aggressively monitors and tests our water supply for hundreds of contaminants. In 2017 alone, we invested nearly half a million dollars on laboratory testing to meet regulatory standards.

"Golden State Water is a professional water provider, and we have approximately 500 highly trained members on our team who work together to ensure the drinking water delivered to customers meets all state and federal quality standards," said Denise Kruger, Senior Vice President of Regulated Utilities for Golden State Water. "From investments to maintain our distribution systems to testing and treating the water, we hold ourselves to a very high standard so our customers can have peace of mind when they go to the tap."

Golden State Water prides itself on getting the job done right, and our team of experts strives to provide consistent water service and prevent water quality issues.
