

Bay Point

Proposed 2028-30 Infrastructure Investments and Water Rates

Customer Service Drives Every Investment

In July 2026, Golden State Water proposed a General Rate Case (GRC) that outlines the investments and rates needed to support safe, reliable water service from 2028 through 2030. We understand that customers want to know why rates may change and how those dollars would be used. That is why we are committed to explaining the proposal clearly, including the local infrastructure investments that would help treat, store and deliver safe drinking water.

Rate-Making Principles

Strengthening the Reliability of Local Water Systems

Health, Safety and Regulatory Compliance

Reducing Water Waste, Protecting Supplies

Support Safe, Clean and Affordable Water for Every Community

Proposed Bay Point Water Infrastructure Investments

The rates proposed for 2028-2030 will provide customers in the **Bay Point Service Area** with long-term value by investing over **\$14 million** in local water infrastructure essential to delivering safe, high-quality, and reliable drinking water.

Proposed investments include converting the Hill Street Control Room into a field office, constructing an equipment building to support local operations, installing approximately 2,200 feet of 16-inch water main, 300 feet of 8-inch water main, and 20 feet of 12-inch water main, improving pressure management facilities, and decommissioning the Chadwick Booster Pump Station. These projects, combined with ongoing pipeline replacements throughout the service area, will improve water quality, strengthen system reliability, and extend the life of critical water infrastructure. Together with the company's ongoing investments in water treatment technology and fire hydrants that support public safety, new investments will help maintain safe drinking water standards and reliable service for the community.

Understanding the Rate-Making Process

Golden State Water does not set final rates. Every three years, Golden State Water submits a General Rate Case to the California Public Utilities Commission (CPUC) describing the investments and operating costs needed to provide safe, reliable water service. The CPUC decides whether to approve, modify or deny the request after a public review process. The Public Advocates Office, an independent consumer advocate within the CPUC, reviews utility requests and advocates for the lowest possible rates consistent with safe and reliable service.

Customer Rates at Work: Strengthening Water Reliability & Safety

Proposed Bill Impacts

Golden State Water understands that any increase in customers' bills matters. When Golden State Water proposes new rates, water affordability and water safety must go hand in hand. **Rates should be no higher than necessary, but they must also support the services and infrastructure needed to treat and deliver safe drinking water 24/7.**

The average **residential customer** in the Bay Point Customer Service Area with a 5/8 x 3/4" meter using 5,236 gallons (7 Ccf) per month would see their current monthly bill increase from **\$84.26** to **\$103.30** in 2028, at the earliest (excluding any applicable surcharges).

The average **commercial customer** in the Bay Point Customer Service Area with a 5/8 x 3/4" meter using 63,580 gallons (85 Ccf) per month would see their current monthly bill increase from **\$651.16** to **\$705.06** in 2028, at the earliest (excluding any applicable surcharges).

Investing in Reliable Water Systems Across California ***32% investment increase between the 2025-27 GRC and the 2028-30 Proposed GRC***

Financial Assistance for Qualified Customers

Golden State Water understands that household budgets can be stretched. Financial assistance is available to eligible customers who need help paying their water bill.
